Profile Summary

B.Sc. Mathematics graduate (CGPA 9.2/10) seeking entry-level BI Analyst, Data Analyst, and Power BI Developer roles and internships. Built three SQL and Power BI projects on 1M+ events, 100K customers, and 200+ marketing campaigns, turning raw data into KPIs, root-cause findings, and prioritized recommendations.

Skills

Core Tools: SQL (MySQL, PostgreSQL), Power BI, DAX, Power Query, Excel
SQL Techniques: Joins, CTEs, Subqueries, Window Functions, Views, Aggregations
BI & Analysis: Data Modeling, Dashboard Development, KPI Reporting, Data Cleaning & Validation, Business Analysis, Root-Cause Analysis, Marketing & Revenue Analytics

Projects

Marketing Performance Analysis

GitHub Project

PostgreSQL | Power BI | DAX | Power Query | Synthetic dataset

- Analyzed 200+ campaigns in a 3-page Power BI report with DAX measures for ROAS, ROI, CPC, CPA, CTR, and click-to-conversion rate; cleaned and validated the data in PostgreSQL.
- Flagged 12 high-spend, weak-return campaigns (5 also overspent allocated budgets; 10 overspenders in total); low-value product mix depressed ROAS despite reasonable CTR and conversion.
- Separated campaigns with under two months of data (one ran only 4 days at INR 25K/day) from sustained losses (3 months at INR 20K/day) to avoid premature conclusions.
- Recommended two-month budget-cut tests on 7 campaigns with high-value products only, spend caps for the 10 overspenders, and reallocation to 10 campaigns that responded better to higher spend.

Marketing & E-commerce Analytics Dashboard

GitHub Project

PostgreSQL | Power BI | DAX | Power Query

- Modeled customer, product, transaction, event, and campaign data (1M+ events, 46K+ orders, 100K customers, 2021–2023); built 5 dashboards with 20+ DAX KPIs including AOV, ARPC, and cohort retention.
- Found revenue concentrated in the US (35%; 55% with India), Electronics and Home (nearly two-thirds), and ages 25–44 (about 70%), peaking every November–December.
- Diagnosed the US revenue decline (4%, second straight year): orders and buyers grew, but AOV and ARPC fell 4% each, traced to male customers (female customers grew) and Electronics (13% of the drop).
- Drilled into US males aged 18–34 buying Electronics (only 229 of 730 purchased; 62% of those bought once), five top products down 64–83%, and Paid Search and Affiliate down 15%; recommended prioritized follow-ups.

Marketing & E-commerce Analytics Using SQL

GitHub Project

MySQL

- Answered 80 business questions across 8 areas (revenue, customers, products, campaigns, markets, trends, concentration, root cause) using CTEs, joins, subqueries, and window functions (LAG, RANK, NTILE).
- Built 5 tables and 2 views, excluding purchases with missing product IDs and refunds with no matching purchase (negative revenue that would understate totals); analyzed refunds separately.
- Defined concentration-risk rules (top 10% of customers at 50%+ of revenue; top 10% of a category's products at 50%+ of its revenue; top 2 categories at 65%+ of a country's revenue).
- Traced month-over-month declines to countries, categories, products, and brands; flagged products where orders rose but revenue fell and age groups where customers rose but revenue per customer dropped.

Education

B.Sc. Mathematics, Bharathidasan University — 2022–2025
Srinivasan College of Arts and Science, Perambalur — **CGPA: 9.2/10**

Certifications

Data Science and Machine Learning – LMES Academy
